

## DOSE AND TITRATION USING CBD OIL FOR PETS

- Always review product label for specific product dosing instructions
- If prescribed by a veterinarian, follow dosing instructions
- Follow standard dosage calculation in all other cases, which requires input on:
  - Pet weight (lbs)
  - The concentration of CBD per ml of tincture/oil
  - The severity of medical condition, disease or illness (low, middle, or high)

### Calculating CBD Tincture Concentration (mg/ml)

1. Record pet's signs and symptoms before starting CBD therapy, including appetite, sleep habits, agitation and issues with mobility
2. Start at the lowest recommended dose
3. Maintain the lowest dose for 3-4 days, monitor for any positive or negative change in behavior
4. Slowly increase dosage (from low to high based on dosage chart), until noticeable improvement in the pet's condition
5. Maintain each dose for 3-4 days before increasing to the next stage
6. If there are signs of adverse reaction, including vomiting, diarrhea, sedation, or other side effects, lower the dose or stop treatment completely

### Calculating CBD Tincture Concentration (mg/ml)

Total CBD per bottle (mg) / Total volume of tincture per bottle (ml) = Total mg per ml  
 1 dropper-full of liquid = 1 ml or 30 drops

**Example:**  
 100 mg of CBD in 15 ml bottle  
 100 mg CBD / 20 ml = 5 mg per ml  
 1 dropper full = 5 mg  
 5 mg / 30 drops = 0.016 mg of CBD per drop of tincture

### Standard Daily Dosage Based on Severity of Medical Condition

- Low: 0.10 mg / lb
- Medium: 0.25 mg / lb
- High: 0.5 mg / lb

### DAILY DOSAGE CHART FOR DOGS

Weight (lbs)	Low (mg)	Middle (mg)	High (mg)
Two Doses Daily - Morning and Evening			
2	0.10	0.25	0.50
5	0.25	0.65	1.25
10	0.50	1.25	2.50
15	0.75	1.85	3.75
20	1.00	2.50	5.00
25	1.25	3.15	6.25
30	1.50	3.75	7.50
35	1.75	4.35	8.75
40	2.00	5.00	10.00
45	2.25	5.65	11.25
50	2.50	6.25	12.50
60	3.00	7.50	15.00
70	3.50	8.75	17.50
80	4.00	10.00	20.00
90	4.50	11.25	22.50
100	5.00	12.50	25.00

**Example Daily Schedule for Dogs:**  
 Dog: 50 pounds, with chronic illness  
 50 lbs x 0.5 mg = 25 mg total daily dose  
 25 mg total daily dose / 2 = 12.50 mg per dose (morning and evening)

### DAILY DOSAGE CHART FOR CATS

Weight (lbs)	Low (mg)	Middle (mg)	High (mg)
Two Doses Daily - Morning and Evening			
2	0.10	0.25	0.50
5	0.25	0.65	1.25
10	0.50	1.25	2.50
15	0.75	1.85	3.75
20	1.00	2.50	5.00

**Example Daily Schedule for Cats:**  
 Cat: 15 pounds, non-chronic illness (medium)  
 15 lbs x 0.25 mg = 3.75 mg total daily dose  
 3.75 mg total daily dose / 2 = 1.875 mg per dose (morning and evening)
